## TECHNICAL SKILLS

Front-End Javascript ES9, React.JS framework, Next.js, Redux, jQuery, React CSS Modules / Styled Components, SCSS / CSS3, Third-Party API integration (AJAX) via REST, Responsive Web Design via media queries, PHP, Wordpress, Git, Node.js, Express, NoSQL, SQL, Headless CMS integration, Adobe Creative Suite (Photoshop, Illustrator, inDesign, XD).

## PROJECTS

### Canoe Financial / 2021

A customer facing site for a Canadian investment firm. Using Next.JS, headless Agility CMS, and a third party Lipper API, we created a platform to provide customers with the most up to date information regarding the firm's funds and investment strategies, as well as historical data to showcase market trends. On top of this, there is a fully customizable CMS for the customer to update any and all content throughout the site in multiple languages. Everything is tied into a Vercel deployment that updates the statically generated site via main branch updates, and web hooks connected through the CMS.

### Best Before Trailer / 2020

Mission: Create a self-sustaining SERN (SQL, Express, React, Node) stack application that can periodically scrape YouTube channels for new movie trailers, extract data for titles and video IDs, then cross reference that data with TMDB's open source API to retrieve posters and release information. Store this data in a SQL DB and route it through a custom Node.js API to a React.js frontend.

### Inagene / 2020

Mission: Create a web application for customers to login and retrieve their DNA test reports populated from a PHP API.

Technology: React.JS, Redux

### Project Hype - Rogers Digital Recruitment / 2018

Mission: Create a fresh and attractive recruitment site for the digital team to attract a new generation of prospects. The site needed to be fully customizable through a Wordpress CMS set up.

Technology: Custom Wordpress Template (from scratch), Fullpage.js, jQuery

### **Cityline Map Maker / 2018**

Mission: Using the Google Maps API, create a web application that can easily and quickly create custom styled maps for the Cityline news team.

Technology: jQuery, Google Maps API

### **React Portfolio / 2018**

Mission: Use React.js to organize an update of my web development/web design portfolio

Technology: React, NPM, React CSS Transition Group

### **React Trivia / 2018**

Mission: Create an interactive trivia webpage pulling data from a third-party API with React.js

Technology: jQuery for AJAX, React.js, Google Fonts, Registered Service Workers

## **EXPERIENCE**

### **SociMedia**

Front End Engineer

JANUARY 2019 - PRESENT

- React.js
- Next.js
- Headless CMS integration
- Agility CMS
- Contentful
- JavaScript
- CSS/CSS3/SCSS
- HTML5
- Wordpress templating
- Coordinate the launch of public facing projects that meet AA accessibility standards
- Work with quality assurance teams to prepare error free, cross browser compatible, responsive applications

### **Rogers Communications**

Rogers Digital / Front End Web Developer

NOVEMBER 2018 - DECEMBER 2018 / TORONTO

- HTML/HTML5
- PHP
- CSS/CSS3/SCSS
- JavaScript
- Wordpress templating
- Google Analytics implementation
- Coordinate the launch of public facing projects that meet AA accessibility standards
- Work with quality assurance team to prepare an error free, cross browser, responsive site

Rogers Sales / Front End Web Developer  
JUNE 2018 - NOVEMBER 2018 / TORONTO

- HTML/HTML5
- PHP
- CSS/CSS3/SCSS and media queries with a focus on cross browser and cross device compatibility, and usability
- JavaScript/jQuery
- Google Maps API manipulation and customization
- Wordpress template creation, content creation, and maintenance
- Break down complex development concepts into simple and digestible explanations, thus aiding the comprehension of team members and clients with little to no development background
- Interface with project team to understand deliverables and due dates
- Participate in project meetings and brainstorming
- Develop Adobe Photoshop and XD based web creative into pixel-perfect, fully responsive websites and eblasts
- Communicate any flags in creative, or development back to project team and work to find solutions
- Interface with QA Analyst to ensure developed work is free from bugs and mistakes

## EDUCATION

B.A. in Media, Information, and Technoculture  
University of Western Ontario / London, Ontario  
September 2003 - April 2008
